

**PULL UP!**

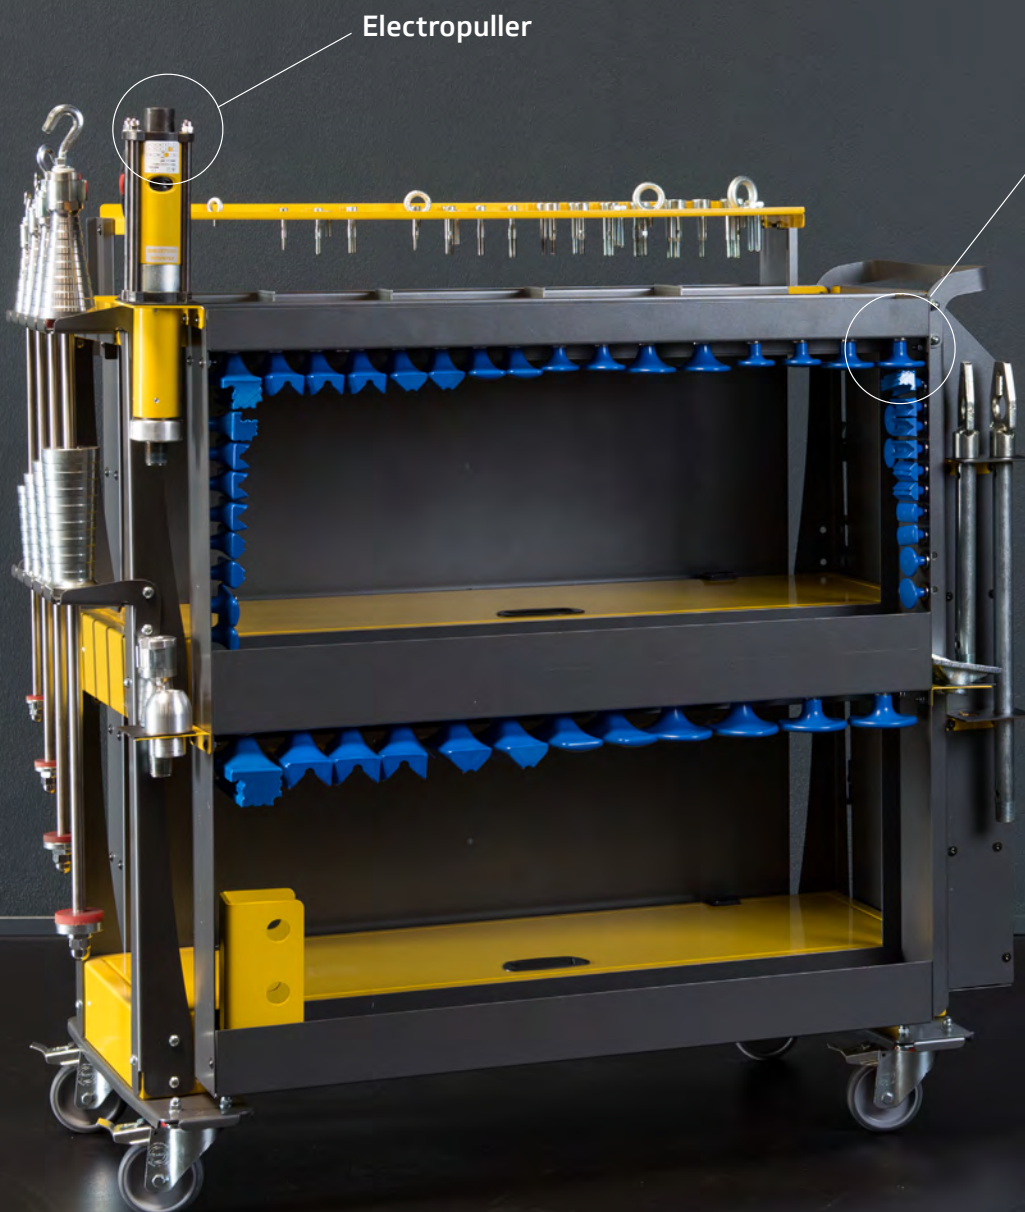

# PULL UP!

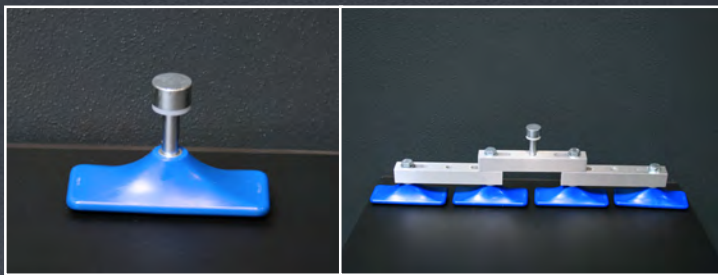

**PULL UP!** je izdelek za avtokleparske delavnice, zasnovan na specifični ravnalni tehniki, ki uporablja sesalne nastavke, lepilo in udarne uteži (ali vlečnega konja z Electropuller-jem).

Ustrezen je za uporabo tako na jeklu kot aluminiju, omogoča izvajanje ravnanja z zunanje strani panela oz. površine brez potrebe po demontaži ali montaži notranjih delov.

**PULL UP!** is a bodyshop product based on a specific straightening technique that uses suction cups, glue and impact weights (or pulling column with Electropuller).

Suitable for both steel and aluminium, it allows for straightening to be performed from the outside of the panel or lining without any need to disassemble or reassemble internal parts.

Posebej oblikovani vlečni nastavki se lahko uporabljajo tako posamezno kot skupaj, zahvaljujoč posebnim palicam, ki jih lahko izberete glede na tip poškodovanega dela.

The specially shaped suction cups can be used individually or together, thanks to specific bars to be selected based on the type of damaged parts.

Enojni vlečni nastavek

Single suction cup

Večdelni vlečni nastavek

Multiple suction cups

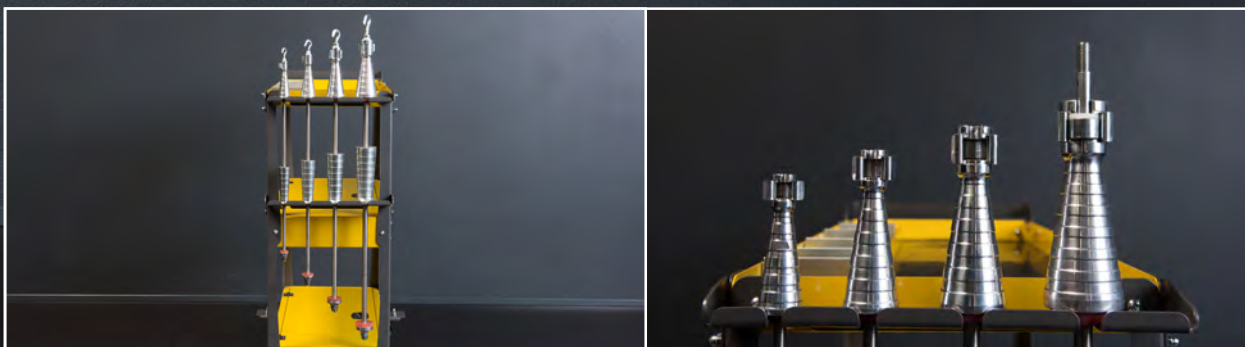

**PULL UP!** ne prežge ali preluknja panela ali pločevine, prav tako ni potrebno odstraniti akumulatorja.

**PULL UP!** does not burn or puncture the panel or car cover, and it is not necessary to remove the battery.

Applikacija **PULL UP!**

Application of **PULL UP!**

4 udarne uteži ki drsenijo na ležajih: za majhne, srednje in večje poškodbe

4 impact weights available for sliding on bearings: for small, medium and large damage
